Product information CI 1300 CL (corrosion inhibitor)

Use
CI 1300 CL is a closed system and half closed system corrosion inhibitor. CI 1300 CL is composed of robust, excellent performing corrosion inhibitors, which maximise the performance of the treated systems.

CI 1300 CL provides provides multi-metal inhibition for aluminium, aluminium alloys, ferrous alloys (LCS, cast iron, stainless steel, galvanized steel) as well as for copper alloys.

CI 1300 CL is designed for use in industrial water systems such as chiller, cooling systems hot water systems, mixed glycol-water systems, engine cooling systems and compressor cooling systems. CI 1300 CL is specifically designed for use with deionised water. The range of temperature is between 5°C – 220°C.

Features
CI 1300 CL is less toxic compared to traditional formulations and contains no heavy metals, nitrite, molybdate or borate. The product provides an especially optimized new buffer system following SVHC regulations.

CI 1300 CL minimizes biocide need due to absence of nitrite. CI 1300 CL is compatible with glycol systems.

These data are to be seen as typical values and should not be considered as specifications.

Dosing
CI 1300 CL should be fed undiluted, directly into the system. The use of a dosing pump is recommended for ease of feeding. Dosage requirements vary and depend upon a number of system operation characteristics. Especially the maximum system temperature and the material surface temperature are essential. Optimum performance can often be assured when CI 1300 CL is fed to a clean system.

Recommended dosage rate is between

\[ t < 100°C => 5000ppm \]
\[ 100°C < t < 180°C => 5000 \text{ bis } 7500ppm \]
\[ 180°C > t < 220°C => 7500 \text{ bis } 10000ppm \]

A test kit is available.
